

Misinformation about MMS

Unfortunately there is much misinformation floating around regarding MMS. Much of this misinformation comes from bogus media stories that intentionally attack MMS and other alternative methods.

However, some of the misinformation also comes from well-meaning people. This is due to many reasons. Some zealous folks spread the word, but have failed to keep up-to-date with new developments; therefore they are passing on outdated information. Other would-be authorities, and/or owners of websites, for any number of reasons, simply get it wrong. Whatever the case may be, there is sufficient confusion and misinformation surrounding MMS.

Chemistry

Although the chemical formula for chlorine is "Cl", the chemical formula Cl is also found in the chemical formula for chlorine dioxide (ClO₂), and it is also found in the chemical formula for table salt (NaCl). Chlorine dioxide is totally different from common household bleach (sodium hypochlorite, which also has Cl in its chemical formula, NaClO) which is toxic and known to be cancer causing.

Chlorine dioxide (ClO₂) is not cancer causing and has an amazing ability to destroy (through oxidation) disease-causing microorganisms that may be on or in the human body, while doing no harm to the body. Because of the chemical nature of chlorine dioxide, it destroys these micro-organisms in such a manner that it is also destroyed at the same time, leaving behind only a few grains of plain table salt, discharged oxygen atoms, and dead micro-organisms, which the body can easily wash out of the system.

Sodium Hypochlorite (Bleach)
NaClO

Table Salt

Chlorine Dioxide (MMS)
ClO₂

Clarification

MMS is the general acronym term used throughout the world to indicate many of the different uses of a solution of sodium chlorite in water. Sodium chlorite is a mineral/chemical, that when mixed with a food grade acid generates chlorine dioxide. Chlorine dioxide kills diseases inside and outside of the human body, and, it is chlorine dioxide which is the active ingredient used in most of our protocols.

So, the question is sometimes posed: What is MMS? Is it sodium chlorite? Or is it chlorine dioxide? The answer is: It is both!

As said above, the term MMS is often used as a generic term to describe what is called Master Mineral Solution. In this context one might say, "Well, it's the mineral solution, therefore it's chlorine dioxide." Yes, but then again, a 22.4% solution of sodium chlorite is also usually sold by the name of MMS, and is called MMS in this, and other books and websites.

MMS is referred to as a 22.4% solution of sodium chlorite in water, and use the acronym MMS1 to indicate that a food acid has been added to MMS which generates a chlorine dioxide solution. Technically MMS is sodium chlorite (a 22.4% solution in water), and MMS1 is MMS plus an activator, which produces chlorine dioxide. However, in every day talk both are often simply called MMS.

One might say, "It's time for my MMS dose", (meaning their activated MMS drops in water), or "Hand me the MMS so I can mix up my dose", meaning hand me the bottle of 22.4% sodium chlorite solution which will then be mixed with food grade acid to produce chlorine dioxide. Or, taking it further, one might say, "I have to order some MMS", which is likely to mean he/she will order a bottle of sodium chlorite 22.4%, plus a bottle of food grade acid.

Note

"I want to clarify a very important point. Many people naturally say "MMS cures" this or that. I've made this same statement myself from time to time in certain situations, when put on the spot, or when the words were put in my mouth, or as a matter of going with the flow of terminology that others use. In our speech and in our global society, we often blur the lines with words and their meanings. But for the record, I want to clarify here, MMS does not cure disease. MMS kills pathogens and destroys (oxidizes) poisons. When pathogens and poisons in the body are reduced or eliminated, then the body can function properly, and thereby heal. I often say, "The body heals the body". MMS helps to line things up so the body can do just that".
